

# Basic requirements for a prefabrication company

The manufacturing process of Graphic Concrete™ is basically the same as with a traditionally exposed fine aggregate surface. The following basic requirements need to be fulfilled:

**Knowledge and skill** to produce exposed fine aggregate surface (see also DS 5: Graphic Concrete™ mixtures)

**Horizontal casting:** Graphic Concrete™ works with horizontal casting in prefabrication.

**High-quality moulds:** Graphic Concrete™ requires a carefully levelled and clean mould table to guarantee the best result.

**Mould vibration** (or self-compacting concrete): Normal reinforcement and vibration are used with Graphic Concrete™. Pocket vibration is only allowed in special cases and with ultimate care.

**GC Technology Transfer is carried out** prior to commercial use of Graphic Concrete™

---

Graphic Concrete Ltd trains and assists prefabrication companies to use Graphic Concrete™ technology. We also offer technical support.
